

# Care instructions

Congratulations on your decision to invest in the eZip Track Blind®. Given the correct care and use, your blinds will not only keep their wow factor but function optimally for many years to come.

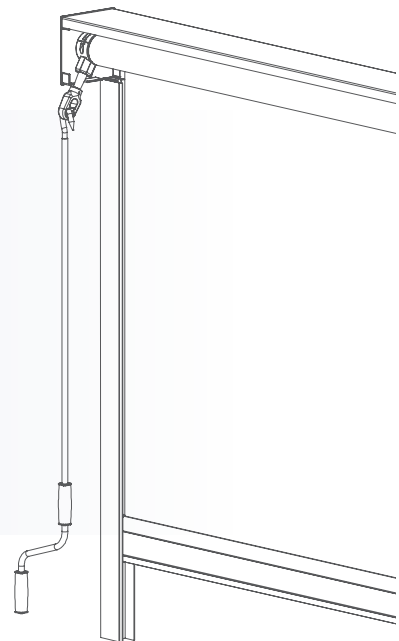

## motorised

- Motorised eZips are easy and hassle free to operate from a remote or mobile app.
- Your installer will program the remote control allowing operation of multiple eZips from the one remote, individually or together.
- Your motorised eZips will automatically stop when lowering and taking up.
- Do not hold the remote button for a prolonged period, only one touch depress is necessary.
- Stop your eZips at any height that suits you.
- If you lose power, you will not be able to operate your eZips. Do not try to force the eZips up manually.
- The remote batteries will need to be replaced periodically.
- Contact your dealer for assistance.

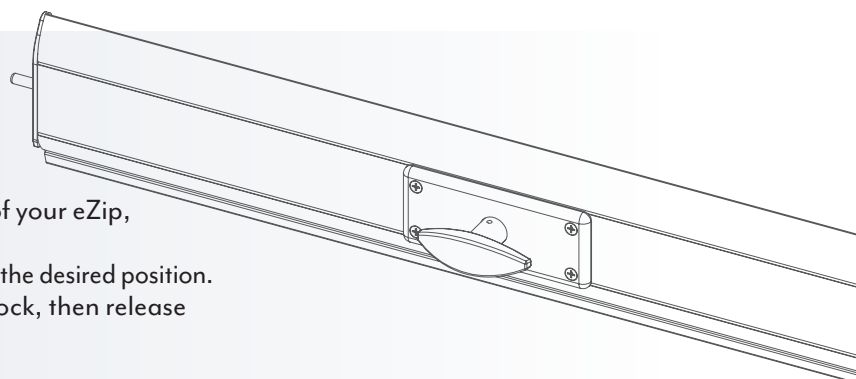

## crank

- Cranks are super strong and reliable. No need to bend down to the bottom rail.
- Your eZips will be fitted with a ring at the top corner and a handle to operate them.
- Your installer will show you how to operate the blinds.
- Hold the handle with two hands (one on each grip) and hook onto the ring. Turn the handle to wind your eZip down and reverse to wind your eZip up. Simple.
- Stop your eZips at any height that suits you.
- Remove the crank handle and store in a safe place nearby
- Once your eZips are fully down, wind back the other way slightly, to fully tension the fabric
- If you accidentally overwind when bringing the eZip down, there may be slack in your fabric. No problem, just wind back the other way, until you re-tension the fabric again.
- If you have any difficulty winding, contact your dealer for assistance.

## spring

- Spring eZips are easy to operate. Ideal widths are up to 3.5m.
- As the blinds are always under tension, ensure you assist the bottom rail when winding up and down.
- Your locking handle may be operated from one or both sides of your eZip, depending on your application.
- Turn the handle to release and guide the bottom rail up or down to the desired position.
- At the top and bottom position, you will hear the bottom rail lock, then release the handle back to horizontal.
- At half position, your eZip will not be locked in.

## Care instructions continued...

### track care

- eZips will perform better used regularly and not left up for long periods.
- Should you only use your eZips occasionally, the fabric may need a little time to re-settle in the down position.
- Clear PVC may particularly need more time to re-settle and stretch in the sun.
- Over a period of time, dust can build up in the tracks. Simply hose out with clean water and allow to dry. There is no need for lubricants in the track. If you do use a lubricant, silicon spray is recommended. DO NOT use WD40 or oil based products.
- Silicon spray may cause a squeaky noise, which is normal and will cease after a few uses.

### fabric care: mesh or pvc

- Fabric can retain a memory. Leaving the blind down for a period of time will settle the fabric.
- Clear PVC may show dirt more readily and require cleaning more often.
- PVC will mark easily if not cleaned properly or regularly.
- DO NOT use any harsh chemicals to clean the cloth.
- A soft cloth and *must* be NON-ABRASIVE.
- Dry off excess water with a microfiber or chamois cloth.
- Cleaning products are optional and will clean and polish your PVC and keep it running smoothly.
- Cloth that is not maintained, particularly clear PVC, may cause clouding and deterioration of the cloth over a period of time. Dirt and clear PVC are not a good match left rolled up for long periods.

### using eZips in extreme weather

- eZips are super tough, they will handle high winds, however, common sense should prevail, and eZips should be taken up.
- If your eZips need to be brought up during a storm, please operate them individually due to possible wind gusts.
- eZips should not be left at half way position during extreme weather.
- A wind sensor may assist in taking up eZips in high winds.

### warranty

- eZip Track Blinds® come with a 2 year warranty for components, 5 years for motors and 5 years for fabric.
- Warranty does not cover damage arising from mis-use, lack of maintenance, incorrect installation or adverse weather conditions.
